

MA5671 Independent Optical Module

Overview

OptiXstar MA5671A is a mini plug-and-play Passive Optical Network (PON) access device an Optical Network Unit (ONU) that supports one-stop deployment, even achievable offline when using Gigabit-capable Passive Optical Network (GPON) upstream transmission. SmartAX MA5671: Access product manuals, HedEx documents, product images and visio stencils. Did you know that you can replace the fiber optic modem/router supplied by your internet service provider (ISP) with a simple SFP stick that runs Linux and does the mapping of light into Ethernet packets directly into your router?

Hack GPON is the ultimate resource with tutorials and guides for. The MA5671A is a SFP ONU developed by Huawei. In the downstream direction, the MA5671A connects to a switch or router through a GE port to provide the high-speed Internet (HSI) and VoIP services; in the upstream direction, the MA5671A connects to an OLT through a GPON port The SFP Fiber Module. The stick has a TTL 3.3v UART console (configured as 115200 8-N-1) that can be accessed from the SFP connector. Note Some USB TTL adapters label TX and RX pins the other way around: try to swap them if the connection.
