

Magnets installed in the distribution box

Summary of Content

Magnets can be used on or in distribution boxes in specific ways, but their placement and strength determine safety and effectiveness.

Industrial Use of Magnets

In industrial settings, such as precast concrete or specialized distribution boxes, magnets are integrated into inserts to hold components in precise positions during installation. These magnets are often combined with rubber bodies to allow easy placement and removal, leaving a recess in the concrete after removal if needed. They are designed to secure electrical boxes or inserts without affecting the electrical function of the system .

Household or Consumer Distribution Boxes

For residential breaker boxes or metal-clad consumer units, small magnets like refrigerator magnets can be safely placed on the outside of the box. They are commonly used to hold notes or lightweight items. These magnets are not strong enough to interfere with breakers or electrical currents, and they do not pose a shock hazard when placed externally .

Safety Considerations

- Do not place magnets inside the box where they could contact live wires or components, as this could cause minor shocks or interfere with sensitive devices .
- Strong magnets could potentially affect magnetic components in breakers, though typical household magnets are too weak to cause issues .
