

Network cabinet wheel height

Summary of Content

Network cabinet wheels (casters) typically add 2 to 4 inches to the overall height of the cabinet.

Typical Wheel Height

Most network or server cabinets come with casters that range from 2 to 4 inches (50–100 mm) in height, depending on the manufacturer and cabinet size . Smaller cabinets (10U–24U) often have shorter wheels around 2 inches, while full-size racks (42U or higher) may include larger, heavy-duty casters closer to 3–4 inches to support the weight of fully loaded equipment .

Impact on Overall Cabinet Height

When planning installation, it's important to account for the extra height added by wheels. For example, a 42U cabinet with a nominal height of 78 inches may effectively measure 80–82 inches with casters installed . This is crucial for ensuring the cabinet can pass through doorways, hallways, or fit under ceiling-mounted fixtures. Many cabinets allow removal of casters to reduce height temporarily during transport .

Mobility and Stability Considerations

- **Mobility:** Casters make it easier to move heavy cabinets, especially when fully loaded with servers, switches, and UPS units . Always use at least two people when moving large cabinets to prevent tipping.
- **Locking Mechanism:** Most casters include locking wheels to secure the cabinet in place once positioned. This prevents accidental movement and ensures stability during equipment installation or maintenance.
