

# Nicaragua Cable Tray Construction Materials

## Summary of Content

Cable trays in Nicaragua are typically constructed from galvanized steel, stainless steel, aluminum, or fiberglass reinforced plastic (FRP), chosen based on environmental exposure, load requirements, and corrosion resistance.

### Metallic Cable Trays

**Steel and Galvanized Steel:** Widely used for industrial and commercial installations, steel trays provide strong mechanical support and can serve as grounding conductors. Galvanized steel offers enhanced corrosion resistance, making it suitable for humid or coastal areas in Nicaragua . **Stainless Steel:** Ideal for high-humidity, coastal, or chemical-exposed environments, stainless steel trays resist corrosion and high temperatures, ensuring long-term durability . **Aluminum:** Lightweight and corrosion-resistant, aluminum trays are easy to install and maintain. They are commonly used in chemical plants or areas where weight reduction is important .

### Non-Metallic Cable Trays

**Fiberglass Reinforced Plastic (FRP/GRP):** FRP trays are non-conductive, lightweight, and highly resistant to chemical corrosion. They are suitable for fertilizer plants, chemical processing facilities, or coastal installations where metallic corrosion is a concern .

### Standards and Compliance
