

Offshore Price Cabinet Cold Aisle Waterproof Type

Summary of Content

Offshore cabinets designed for cold aisle setups are typically made from durable, waterproof materials like GRP and can be customized for modular containment integration.

Offshore Cabinet Features

Offshore cabinets, such as those offered by Dupolco, are specifically engineered to withstand harsh marine and offshore conditions. They are commonly made from glass-reinforced polyester (GRP), which provides high durability, corrosion resistance, and waterproofing, making them ideal for environments exposed to moisture, salt, and extreme temperatures. These cabinets are available in custom sizes and configurations, allowing them to accommodate various equipment and installation requirements. They are suitable for both electrical and IT equipment, ensuring protection against environmental hazards.

Cold Aisle Containment Compatibility

In data centers, cold aisle containment (CAC) systems are used to separate cold supply air from hot exhaust air, improving cooling efficiency and equipment reliability. Cabinets intended for cold aisle setups should:

- Fit within modular aisle containment systems with adjustable frames and panels.
- Include gasketed seals, sliding or hinged doors, and roof panels to prevent air mixing.
