

Outdoor cabinet protection level

Summary of Content

For outdoor cabinets, an IP rating of at least IP55 is recommended, with IP65 or higher for harsher conditions.

Understanding IP Ratings

IP (Ingress Protection) ratings indicate how well an enclosure resists the intrusion of solid objects and liquids. The rating consists of two digits: the first digit measures protection against solids like dust, and the second digit measures protection against water. For example:

- IP44: Protects against solid objects larger than 1 mm and splashing water from any direction.
- IP55: Limited dust protection and resistance to low-pressure water jets.
- IP65: Fully dust-tight and protected against water jets.
- IP66-IP67: Designed for very harsh conditions, including strong water jets or temporary immersion.

Recommended Levels for Outdoor Use

- General outdoor conditions: IP55 is typically sufficient to protect against dust, rain, and low-pressure water jets.
- Harsh weather or coastal areas: IP65 or higher is recommended to withstand heavy rain, wind-driven water, and salty air.
- Extreme conditions: IP66 or IP67 may be necessary for areas with strong water jets, temporary immersion, or high environmental stress.
