

PDU power distribution box in the computer room

Overview

A power distribution unit (PDU) is a device fitted with multiple outputs designed to distribute electric power, especially to racks of computers and networking equipment located within a data center. Data centers face challenges in power protection and management solutions. This is why many. Power your data centre, server room, or network rack with precision, efficiency, and full control. Whether you need simple, reliable power strips or. From basic PDUs, to monitored and switched rack power distribution units, to locking receptacles, Vertiv's solutions will offer the power distribution you need, as well as remote monitoring and management of your assets' power usage, so you can rest assured everything is running at peak. Data center PDUs distribute power from UPS or utility-backed systems to rack equipment. This guide explains PDU types, key features, deployment styles, and how to choose the right unit for uptime, monitoring, and power efficiency.
