

Price list for simple optical cable reeling machines

Summary of Content

A basic optical cable reeling machine typically costs between \$500 and \$5,000, depending on size, automation, and capacity.

Price Range and Factors

Simple optical cable reeling machines, often manual or spring-driven, are the most affordable options. These machines are designed for light-duty use in workshops, small-scale cable handling, or temporary setups. Prices generally start around \$500 for compact, manual units and can go up to \$2,000-\$5,000 for semi-automatic or motorized models suitable for moderate industrial use. Factors influencing cost include:

- **Automation Level:** Manual machines are cheaper, while electric or pneumatic models with automated retraction and tension control are more expensive.
- **Cable Capacity:** Machines designed for longer or heavier optical cables require larger drums and stronger motors, increasing the price.
- **Build Quality and Materials:** Industrial-grade steel frames, precision bearings, and high-quality motors add to the cost.
- **Additional Features:** PLC controllers, variable speed motors, and safety enclosures for hazardous environments can significantly raise the price.
