

Price of Aluminum Composite Panel for Cable Trays

Summary of Content

Aluminum composite panels (ACPs) typically cost between \$5 and \$15 per square foot, depending on thickness, core material, and coating type, which can be applied for cable tray installations.

Pricing Overview

The cost of aluminum composite panels varies based on several factors:

- **Panel Thickness:** Standard ACPs range from 3mm to 6mm, with 4mm being common. Thicker panels generally cost more due to increased material usage and rigidity .
- **Aluminum Skin Thickness:** The outer aluminum layers usually range from 0.1mm to 0.5mm. Panels with thicker skins are more durable and slightly more expensive .
- **Core Material:** Polyethylene cores are more economical, while fire-retardant mineral cores (A2 or FR-grade) are pricier due to enhanced safety and reduced flammability .
- **Coating Type:** PVDF-coated panels offer superior weather and UV resistance and are the most expensive. Double polyester paint is moderately priced, and regular polyester paint is the most budget-friendly, suitable for indoor cable tray applications .
- **Panel Size and Brand:** Larger panels or premium brands may increase the cost per square foot .
