

Price of Low-Voltage Intelligent Distribution Cabinets in Fiji

Summary of Content

The price of low-voltage intelligent distribution cabinets in Fiji varies widely, typically ranging from USD 500 to USD 3,000 or more per unit depending on specifications, smart features, and supplier.

Overview of Low-Voltage Intelligent Distribution Cabinets

Low-voltage intelligent distribution cabinets are designed to manage and distribute electricity safely and efficiently in residential, commercial, and industrial settings. They handle voltages below 1000 volts and often include smart features such as remote monitoring, predictive maintenance, and energy management systems, which can increase the cost compared to standard cabinets. Common types include circuit breakers, switchgear, and distribution panels, each tailored for specific applications.

Factors Affecting Price

- **Smart Features:** Cabinets with IoT-enabled monitoring, automated fault detection, and energy optimization are more expensive than basic models.
- **Material and Build Quality:** Cabinets made from high-quality composites, ABS plastics, polycarbonate, or metal enclosures offer better durability and insulation but increase cost.
- **Capacity and Size:** Larger cabinets with more feeders or higher amperage ratings cost more due to additional components and complexity.
