

Price of installing a distribution box in a partition wall

Summary of Content

Installing a distribution box in a partition wall typically costs between \$1,200 and \$2,500 for a standard 100-125A indoor panel, including labor and materials.

Price Breakdown

- **Materials:** A standard indoor distribution box (100-125A, 16-20 circuits) usually costs between \$200 and \$600 depending on brand and features, while larger or higher-amperage panels can cost \$800 or more .
- **Labor:** Electricians typically charge \$75-\$120 per hour, with installation taking 6-18 hours depending on wall accessibility, wiring complexity, and whether a new circuit run is required . For a partition wall, labor may be on the higher end due to cutting, mounting, and routing conduits.
- **Permits and Code Compliance:** Local permits and code upgrades can add \$100-\$300 to the total cost, especially if AFCI/GFCI protection or rewiring is required .

Factors Affecting Cost

- **Wall Type and Accessibility:** Partition walls may require additional labor for cutting, reinforcement, or routing conduits, increasing installation time and cost.
- **Panel Amperage and Circuit Count:** Higher amperage (200A) or more circuits increase both material and labor costs, potentially reaching \$3,000-\$6,000 for complex setups .
- **Wiring Complexity:** Long runs, multiple circuits, or integration with existing panels can add 20-40% to the base cost .
