

Price of ladder-type long-span cable trays

Summary of Content

Long-span ladder cable trays typically range from \$50 to \$200 per meter, depending on material, load capacity, and customization.

Overview

Long-span ladder cable trays are designed for heavy cable bundles over extended distances, offering fewer support points, high load capacity, and efficient routing for industrial, commercial, and technical installations. They are available in aluminum, steel, stainless steel, and PVC-coated variants, with options for perforated or solid construction to suit ventilation and protection needs.

Price Factors

- **Material:** Aluminum trays are lightweight and corrosion-resistant, generally less expensive than stainless steel or hot-dip galvanized steel.
- **Load Capacity and Span:** Higher load-bearing trays for longer spans cost more due to reinforced construction.
- **Thickness:** Standard thickness ranges from 0.6–2.5 mm, with heavy-duty hot-dip galvanized trays typically 1.3–2.5 mm, which increases cost.
- **Customization:** Non-standard lengths, widths, or special coatings can raise the price.
- **Accessories:** Fittings, bends, covers, and connectors add to the total system cost.
