

Price of location for construction site water and electricity distribution boxes

Summary of Content

Temporary construction site power distribution boxes typically cost between \$50 and \$250 per panel, while full installation of underground utilities including water and electricity can range from hundreds to several thousand dollars depending on project complexity.

Electricity Distribution Boxes

Temporary power panels for construction sites come in metered and unmetered types. Metered panels allow monitoring of electricity usage, while unmetered panels provide unlimited access within the installed capacity. The average cost per panel ranges from \$50 to \$250, depending on size, amperage, and features . For more robust, industrial-grade enclosures, such as fiberglass or sheet steel boxes with IP65-IP67 ratings, prices vary based on customization, material, and compliance with standards like IEC 61439 . Rental options are also available, which can reduce upfront costs and include cables, transfer switches, and other accessories .

Installation costs depend on factors such as trenching, conduit placement, distance from the main power source, and local permits. For temporary power poles, professional installation is recommended, and costs increase with project size and complexity .
