

Price of wiring inside the distribution box

Summary of Content

The cost of wiring inside a distribution box typically ranges from \$100 to \$350 for materials, with labor adding \$300 to \$700 depending on panel size, complexity, and regional rates.

Cost Breakdown

The total cost of wiring a distribution box includes materials, labor, permits, and disposal. For a standard residential 100–125 amp panel, the wiring materials alone usually cost \$100–\$350, covering items like MCBs, RCCBs, neutral and phase bus bars, and connecting wires. Labor for installation can range from \$300–\$700, depending on the complexity of the wiring, accessibility of the panel, and local labor rates. Permits and disposal fees may add \$50–\$100 to the total cost. For larger or upgraded systems, such as a 200 amp service, wiring costs increase due to heavier gauge wires, additional breakers, and more complex connections. In such cases, total costs including wiring and installation can reach \$1,200–\$2,000.

Components Affecting Wiring Costs

- **Main MCB or isolator:** The main switch, often a double-pole MCB, handles the full input supply and is the most expensive single component in the DB wiring.
- **MCBs for subcircuits:** Single-pole or double-pole MCBs protect individual circuits from overload and short circuits.
- **RCCB/RCD:** Provides protection against leakage currents and electric shocks, essential for domestic installations.
- **Neutral and phase bus bars:** Connect all outgoing circuits and distribute power safely.
