

Replacement of Huijue ML350 Fiber Optic Sensor

Summary of Content

The Huijue ML350 fiber optic sensor can be replaced by selecting a compatible fiber optic sensor head and amplifier, ensuring proper alignment, and following manufacturer-recommended calibration procedures.

Understanding the ML350 Sensor

The Huijue ML350 is a fiber optic sensor commonly used in industrial automation for precise detection in harsh environments. It consists of a sensor head that transmits and receives light and an amplifier unit that processes the signal. The sensor head is typically passive, making it suitable for tight spaces or areas with high electrical interference, while the amplifier contains the electronics and light source .

Replacement Options

- Direct Replacement from Huijue: Contact Huijue or authorized distributors to obtain an ML350 replacement head or amplifier. This ensures full compatibility with existing wiring and firmware .
- Compatible Fiber Optic Sensors: If the original ML350 is unavailable, consider high-quality alternatives from manufacturers like Keyence, Akusense, or European suppliers. Look for sensors with:
 - Similar detection type (through-beam, reflective, retro-reflective)
 - Matching fiber length and diameter
 - Environmental resistance suitable for your application
