

SC APC Fiber Optic Connector G 654 for Photovoltaic Power Plants

Summary of Content

SC/APC connectors with an 8° angled ferrule provide ultra-low back reflection and high signal integrity, making them ideal for high-power singlemode fiber networks such as those in photovoltaic power plants.

Overview of SC/APC Connectors

The SC/APC (Subscriber Connector/Angled Physical Contact) is a singlemode fiber optic connector featuring a push-pull mechanism for easy installation and removal, combined with an 8-degree angled ferrule end-face that significantly reduces back reflection and optical return loss (ORL) compared to standard SC/PC or SC/UPC connectors. The angled polish redirects reflected light into the cladding rather than back into the fiber core, achieving ≥ 65 dB return loss and ≤ 0.15 dB insertion loss, which is critical for high-precision optical systems.

Compatibility with G.654 Fiber

G.654 fibers are singlemode fibers optimized for long-haul, high-power transmission with low attenuation in the 1550 nm wavelength range. SC/APC connectors are fully compatible with G.654 fibers, ensuring minimal signal degradation and high reliability in environments where high optical power and low reflection are essential, such as photovoltaic power plant monitoring and control networks.

Advantages for Photovoltaic Power Plants

- **High Signal Integrity:** The 8° angled ferrule minimizes back reflection, preventing signal distortion in analog or high-power optical links used for plant monitoring.
