

Specifications of Vietnamese Steel Cable Trays

Summary of Content

Vietnamese steel cable trays are available in various types, sizes, and protective finishes, designed to support and organize power and control cables in industrial and commercial settings.

Material and Thickness

Vietnamese steel cable trays are typically fabricated from premium-grade steel to ensure durability and corrosion resistance . The thickness ranges from 1.0 mm to 2.5 mm, with hot-dip galvanized trays requiring a minimum thickness of 1.5 mm for adequate protection . Electro-galvanized and powder-coated options are also available to enhance corrosion resistance .

Dimensions

Standard lengths of cable trays are 2400 mm to 3000 mm, with heights ranging from 50 mm to 200 mm and widths from 100 mm to 900 mm, depending on the type and application . These dimensions allow flexibility for routing multiple cables and accommodating different load requirements.

Types of Cable Trays

- Ladder Type: Consists of two longitudinal side rails connected by transverse rungs, providing maximum ventilation for heat-producing cables such as power cables .
- Solid Bottom: Made from a single sheet of metal, offering protection from external damage, suitable for control, communication, and non-heat-producing cables .
