

Standard Dimensions of Power Distribution Boxes in Lebanon

Summary of Content

Power distribution boxes in Lebanon typically range from small residential enclosures of 200x200x100 mm to larger industrial cabinets exceeding 600x600x200 mm, with variations depending on material, IP rating, and application.

Common Types and Materials

Plastic Distribution Boxes: Widely used for residential and light commercial applications, these boxes are often made from durable PVC or polycarbonate. They are available in IP65/IP66 waterproof ratings, ensuring protection against dust and water ingress, and come in flush-mount or surface-mount designs. Typical dimensions for plastic boxes range from 200x200x100 mm to 400x400x150 mm, suitable for small circuits and modular components.

Metal Distribution Boxes: Used in industrial or high-demand settings, these are made from cold-rolled or stainless steel with thicknesses between 1.5 mm and 3 mm. They provide robust protection and are often equipped with hinged doors, knockouts, and gland plates for cable routing. Standard sizes for metal enclosures in Lebanon include 300x300x150 mm, 400x400x200 mm, and 600x600x200 mm, with larger custom sizes available for complex installations.

Considerations for Selection

- **IP Rating:** IP65/IP66 ensures waterproofing and dust protection, critical for outdoor or industrial environments.
