

Stst Multimode Fiber Optic Patch Cord

Summary of Content

An ST to ST multimode fiber optic patch cord is a high-performance cable with ST connectors on both ends, designed for reliable data transmission in fiber optic networks.

Overview

ST to ST multimode fiber optic patch cords feature ST (Straight Tip) connectors on both ends and are commonly used to connect network devices in data centers, enterprise networks, and telecom environments . These cables are available in OM1 (62.5/125 μm), OM2, and OM3 multimode types, providing flexibility for different bandwidth and distance requirements . The multimode fiber allows for high-speed data transmission over short to medium distances, making it ideal for 10 Gigabit Ethernet and other high-throughput applications .

Key Specifications

- Fiber Type: Multimode (OM1 62.5/125 μm is common)
- Connector Type: ST on both ends, typically with UPC (Ultra Physical Contact) polish for low back reflection
- Jacket Material: Options include PVC, OFNR (Riser rated), or LSZH, depending on installation requirements
- Cable Lengths: Available in standard lengths such as 1m, 2m, 3m, 5m, or custom lengths
- Duplex or Simplex: Duplex cables are common for bidirectional communication
