

# Switch Port Speed Optical Module

## Overview

It is a compact, hot-swappable optical or electrical module. Based on industry standards defined by the Multi-Source Agreement (MSA), SFP modules are widely used in switches, routers, network interface cards (NICs), and other networking devices. Defined under the Small Form Factor Committee specifications and widely deployed in equipment compliant with IEEE Ethernet standards, SFP. Majority of the switch ports in AI back-end Networks to be 800 Gbps in 2025 and 1600 Gbps in 2027, showing a very fast migration to the highest speeds available in the market. These challenges are forcing innovation to happen at all levels, including pluggable modules. But pluggable modules still. Small Form-factor Pluggable (SFP) is a compact, hot-pluggable network interface module format used for both telecommunication and data communications applications. Transceiver compatibility is a key concern in enterprise network deployments. Can an SFP.
