

Testing Internet Speed with a Fiber Optic Router

Summary of Content

To accurately test your fiber optic internet speed, use a wired Ethernet connection, online speed test tools, and router diagnostics to measure download, upload, ping, and jitter.

Step 1: Use a Wired Connection

For the most accurate results, connect your device directly to the fiber optic modem or router using an Ethernet cable. Wi-Fi can introduce interference and reduce measured speeds, especially on high-speed fiber connections .

Step 2: Choose a Speed Test Tool

Several online tools can measure your internet speed in real time:

- Speedtest by Ookla: Provides download, upload, and ping measurements .
- IPStik Gigabit Speed Test: Offers multi-connection testing for high-speed fiber and cable connections, giving more accurate results for gigabit speeds .
- IQ Fiber Speed Test: Measures download, upload, ping, and jitter, and explains what each metric means for your network performance .
- FIREPROBE: HTML5-based tool that evaluates speed and quality, including jitter and latency .

Step 3: Use Router or Modem Diagnostics

Many fiber optic routers include built-in diagnostic tools:
