

The fiber optic cable connected to the router

Summary of Content

A fiber optic cable connects to a router through an Optical Network Terminal (ONT), which converts the optical signal into an electrical signal that the router can use.

Required Equipment

To set up a fiber connection, you will need:

- Optical Network Terminal (ONT): Provided by your ISP, it converts light signals from the fiber into electrical signals for your router .
- Fiber optic cable: Usually thin and yellow, with SC/APC or SC/UPC connectors .
- Router: Ensure it has a WAN or SFP port compatible with fiber input .
- Ethernet cable (Cat5e or higher): Connects the ONT to the router .
- Power adapters: For both the ONT and router.

Step-by-Step Connection

- Install the ONT
- Locate the fiber wall outlet where the ISP's fiber line enters your home.
- Connect the fiber optic cable from the wall outlet to the ONT's optical port, handling the connector carefully to avoid dirt or damage .
- Power on the ONT and wait for the status lights to stabilize, which may take a few minutes.
