

The hierarchical distribution box should meet the following requirements

Overview

The main distribution box shall be set in the area close to the power supply; the distribution box shall be set in the area where the electrical equipment or loads are relatively concentrated; the interval between the distribution box and the switch box shall not exceed 30m;. The main distribution box shall be set in the area close to the power supply; the distribution box shall be set in the area where the electrical equipment or loads are relatively concentrated; the interval between the distribution box and the switch box shall not exceed 30m;. The power distribution system at the construction site shall implement hierarchical power distribution, which shall be equipped with a general distribution box (or distribution room), a distribution box below the general distribution box, a switch box below the distribution box, and electrical. Construction site general distribution according to three, so the electric box should also be graded settings, that is, under the total distribution box, set the distribution of electric boxes, distribution boxes below the switch box, switch box below is the power equipment. The multimedia. The power distribution from the power input point to the end electrical equipment needs to go through three levels of Powbinet. This architecture uses the main distribution box as the primary hub, with several sub-distribution boxes at lower levels, forming a tree-like power supply network. The. 1□ The power distribution system at the construction site shall be equipped with indoor general distribution panel and distribution box or outdoor general distribution box and distribution box for hierarchical power supply, and the capacity of distribution devices at all levels shall match the. 1□ The manufacture and installation of distribution box and switch box shall meet the following requirements: 1. Check for proper IP/NEMA ratings and material quality. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typic...
