

The role of cabinets in communication equipment rooms

Summary of Content

Each cabinet in a communication equipment room serves a specific role in organizing, protecting, and distributing network and telecommunication equipment.

Main Equipment Room (MER) Cabinets

The MER acts as the primary hub for a building's IT and telecommunications infrastructure. Cabinets in the MER typically house:

- Backbone cabling panels for fiber optic and copper connections entering the building.
- Telecommunication equipment such as telephone exchanges, routers, core switches, and firewalls.
- Power protection systems, including uninterruptible power supplies (UPS) to maintain uptime during outages.
- Data storage servers if on-premises storage is used.
- These cabinets serve as the central distribution point, connecting all other equipment rooms and ensuring high-quality backbone connectivity across the building .

Satellite Equipment Room (SER) Cabinets

SER cabinets function as secondary hubs, often located near specific departments or areas of the building. Their roles include:

- Housing network switches and patch panels that connect local devices to the MER.
