

Thickness of Ladder-type Tray-type Cable Trays

Summary of Content

Ladder-type cable trays have material thickness standards that vary by duty class, tray width, and application, typically ranging from 1.5 mm to 3.0 mm for steel trays, with fiberglass and composite trays following manufacturer-specified resin-to-fiber ratios.

Material Thickness by Tray Type and Duty Class

- **Steel Ladder Trays:** Thickness depends on the duty class (light, medium, heavy) and tray width. Standard steel ladder trays generally have side rail thicknesses from 1.5 mm (light duty) to 3.0 mm (heavy duty). Wider trays or those with larger rung spacing may require thicker side rails to maintain load capacity and minimize deflection .
- **Fiberglass/Composite Ladder Trays:** Thickness is determined by the glass fiber-to-resin ratio. Pultruded components typically maintain 45–65% glass fiber by weight, while molded components range from 25–45%. These trays are designed to meet IEC 61537 standards for safe working load and deflection .
- **Aluminum Ladder Trays:** Aluminum trays are often thinner than steel due to higher strength-to-weight ratios, but thickness must still comply with load and span requirements. Typical aluminum side rail thickness ranges from 1.5 mm to 2.5 mm, depending on width and application .

Key Considerations

Article Content

Ladder Type Cable Trays

Width: 100mm to 1500mm in increments of 50mm. Thickness: 3mm to 8mm depending on support span and loading details. Sizes of

TECHNICAL AND SIZING DATA
