

What are the low-voltage complete sets of equipment for compartment cabinets

Overview

Low voltage complete set distribution cabinets are engineered for versatility, reliability, and efficiency. Deeply cultivating the field of power distribution equipment. GHS168 is our company absorbing foreign technology and developed the design of the low-voltage drawer-type switch equipment. It's a full IP2X protected system consisting of Z-busbar, InLine ZLBM, Z-busbar connectors and Nordicab enclosure. The system assembly with its components are tested and verified. These cabinets consolidate critical components such as switchgear, circuit breakers, transformers, meters, and protective relays into a single, organized enclosure. Whether you design, build, operate, or service buildings or critical facilities, discover four ways to manage. Low-voltage complete set equipment is a complete set of electrical devices used for power distribution, control and protection in scenarios where AC voltage is $\leq 1000V$ and DC voltage is $\leq 1500V$.
