

What is the price of a secondary distribution box

Summary of Content

The cost of a complete secondary distribution box typically ranges from \$200 for basic residential units to over \$2,000 for industrial-grade systems, depending on materials, capacity, and features.

Pricing Overview

The price of a complete secondary distribution box varies widely based on several factors:

- **Material of the enclosure:** Plastic units are the most affordable, while powder-coated steel or high-grade stainless steel boxes are more expensive due to durability and corrosion resistance .
- **Internal components:** A box sold empty is cheaper, but adding high-quality circuit breakers, surge protectors, and busbars increases the cost significantly .
- **Capacity and voltage rating:** Single-phase residential boxes are generally less expensive than three-phase commercial or industrial units .
- **Advanced features:** Smart monitoring, remote control, and digital displays for energy tracking can add to the price .
- **Environmental rating:** Weatherproof or outdoor-rated boxes carry a premium compared to indoor units .

Typical Price Ranges
