

What kind of router should I buy for 100M fiber optic internet

Summary of Content

For a 100 Mbps fiber connection, a Wi-Fi 6 or Wi-Fi 7 router with multi-gig support and strong coverage is ideal, such as the NETGEAR Nighthawk BE9300 or RS700S.

Key Considerations

When choosing a router for a 100 Mbps fiber connection, focus on the following factors:

- **Wi-Fi Standard:** Wi-Fi 6 (802.11ax) or Wi-Fi 7 provides faster speeds, lower latency, and better handling of multiple devices compared to older Wi-Fi 5 routers .
- **Ethernet Ports:** Multi-gig or at least 1 Gbps LAN ports ensure you can fully utilize your fiber speed for wired devices .
- **Coverage Area:** Ensure the router can cover your home or office size. Tri-band routers or mesh systems help eliminate dead zones .
- **Device Capacity:** Consider the number of devices you plan to connect. High-end routers can handle 100+ devices simultaneously without performance drops .
- **Future-Proofing:** Even if your current plan is 100 Mbps, a router capable of multi-gig speeds ensures you won't need an upgrade if you increase your plan later .
