

# Which type of electrical distribution box is best in Finland

## Summary of Content

For Finland, the best electrical distribution boxes are modular, weather-resistant, and compliant with local low- and medium-voltage standards, with options from manufacturers like Ensto and UTU Group.

### Key Considerations

**Voltage Compatibility:** Finnish distribution networks operate at low (0.4–1 kV), medium (1–70 kV), and high voltages (110–400 kV) depending on the application . Residential and commercial buildings typically require low-voltage distribution boxes, while industrial or EV charging infrastructure may need medium-voltage or specialized industrial boxes . **Environmental Durability:** Finland's cold climate and high humidity demand weatherproof and frost-resistant enclosures. Outdoor boxes should have IP-rated protection (IP65 or higher) to prevent moisture ingress and corrosion . **Type of Distribution Box:**

- **Main Distribution Box (MDB):** Central hub for electricity entering a building; ideal for residential and standard commercial setups. Provides bulk load distribution and easy maintenance access .
- **Sub-Distribution Box (SDB):** Feeds specific areas or floors; reduces long cable runs and power loss, suitable for large buildings or multi-floor offices .
